

PHADROID VISUAL TECH LAYOUT

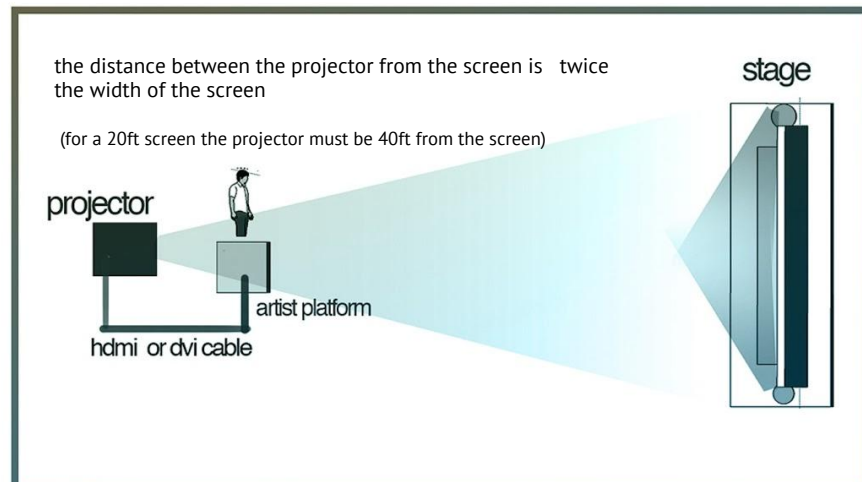

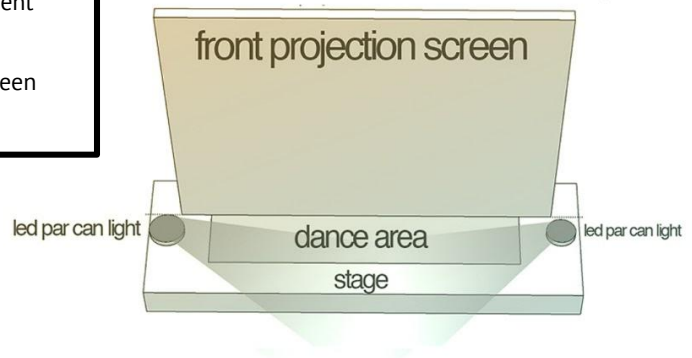

Gear

- projector 5,000 - 18,000 lumens
- white projection screen surface
- 2 LED light par cans
- 1 power outlet for 750 watt projector
- extension cords
- dance platform/stage

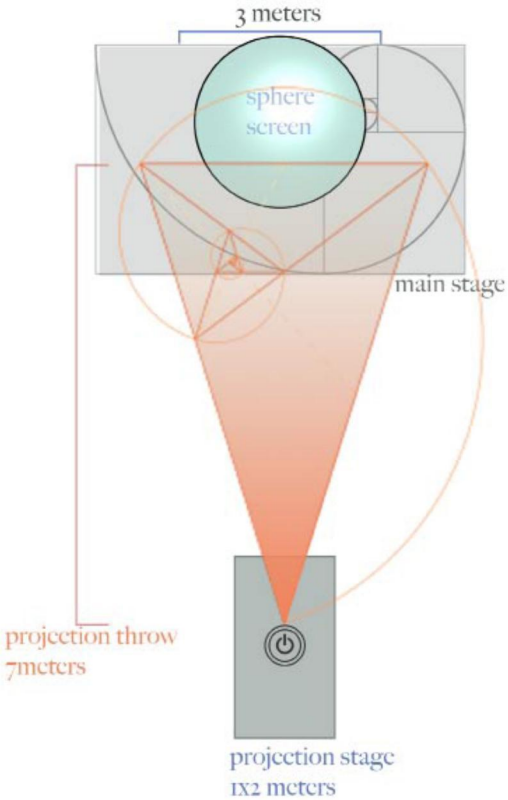

Special Requests

- PHADROID is most effective in a completely dark environment
- the bottom of the screen must meet the dance platform
- dancer needs a minimum of one meter space in front of screen

PHADROID STAGE SETUP

2014-2015

PHADROID TECH RIDER 2014-2015

Logistics/Technical/Backstage

- Some light is directed onto the dancer from each side of the stage for increased visibility of movement within the visuals. Light technicians are kindly asked to turn off all lights as well as any potential light sources for the entire duration of the show and to not add any more lights or special effects than what were specifically agreed to prior to the show.
- At the venue, the visual artist positions himself directly in front of the dancer with a minimum distance of 20 feet from the screen. The addition of a small 1x2 meter platform is ideal for the visual artist's positioning and it creates a theatrical container for the experience. This platform may be positioned in front of the stage within the crowd adding yet another layer of immersion for the audience, while it also serves to amplify the connection between artist and dancer on stage (see design attached).
- The screen must be a minimum of 9x9 feet in its dimensions; the larger the screen surface, the more powerful the visual effects. The screen must be positioned level to the dance platform and should not under any circumstances knock over. A solid, clean white wall may also serve as screen surface if the stage is securely set up directly in front of it.
- PHADROID will require one or more projectors depending on the number of performers. A minimum distance of 20 feet will be required from the projector(s) to the front and/or back of the screen. The front projector may mount directly to the visual artist's laptop tripod. This set is designed to deliver the maximum experience with the minimal amount of set-up and breakdown. One power drop will be required at the visual artist's platform in order to power his laptop and projector equipment.
- Please inquire of individual specifics for technical set-up from the music producers and/or live musicians invited to the given venue. Without any accompanying musician(s), PHADROID will require access to a sound system and someone who is available to cue the music.
- PHADROID requires a dressing room – ideally with sufficient space for warm-up/preparation and privacy. Please inquire of dietary restrictions in case refreshments are kindly provided.
